

A Field Trip to LogiGear and other Software Companies

The DTU International School held a field trip to several software companies in Danang from October 2nd to 10th to offer students a taste of real-time working environments in preparation for their future careers. DTU/CMU International School students visited F-Soft, LogiGear, Enclave and MagRabbit. DTU collaborates with these companies by frequently holding seminars and arranging internships and careers.

DTU lecturers and students at the Enclave Company

Through these field trips, DTU students learn more about corporate requirements and the knowledge and skills required for jobs. Nguyen Minh Toan, a student of the K16 CMU TPM class said: *“This field trip was very important for me and the others. We had good opportunity to use the latest technology, learn how to work in the IT environment and improve our programming, English and team work skills.”*

These activities all help to raise the standard of IT education at DTU day by day. As a result, graduates are actively sought after to meet the stringent requirements of the local workforce.
