

## **DTU Offers New Environmental Studies, Health Care and Medical Programs**

The Vietnamese population is increasingly faced with unpredictable natural disasters, exposure to hazardous chemicals and other problems threatening our longevity. The increasing number of hospitals and health care centers do not have enough experts, which has led to a demand for qualified graduates in such areas. To meet this need, DTU is enrolling students interested in Environmental Studies, Health Care and Medicine in the 2012-2013 academic year.

### **Environment Studies - For a Greener Danang**

To maintain a Green-Clean-Nice environment in Danang, the first thing we need to do is to plant as many trees as possible. However, we should also pay attention to other issues, such as natural resources, waste, poisonous chemicals and so on. As a result, there must be communication between the government, individuals and scientists to improve the awareness of how important it is to protect the environment. On 3rd of August, 2009, DTU officially established Department of Environmental Studies, hoping to provide qualified graduates to meet local environmental demands.

*Students of the DTU Department of Environmental Studies*

In addition to the updating its curricula, provided by universities in Singapore and the US, DTU sends hundreds of faculty members abroad for training every year. Dr. Tran Nhat Tan, Dean of Environmental Studies said: “We often hold workshops, seminars and conferences so that faculty and students to exchange information and experience about participating in research projects. The number of scientific projects conducted by DTU students has increased steadily, year-by-year”.

Students will be provided with basic skills in IT and English (with a 420-460 TOEIC score) that will equip to work for environmental companies or in the chemical, petroleum or electronics industries, for example. Furthermore, it will take only four and a half years to complete their bachelor degrees. As a result, they will have more opportunities to gain jobs in the competitive labor market.

### **Health Care and Medicine - A Wise Choice for your Future**

On 1<sup>st</sup> of March, 2010, DTU was approved by MOET to offer an academic Health Care program in Health Care at both the college and undergraduate levels. Two years later, the DTU Medical Department opened a new specialty in Medicine.

*Modern experimentation equipment - one of DTU's strengths*

DTU's Health Care program is based on collaboration with the University of Seattle and Seattle Pacific University, providing with the knowledge and professional skills from basic to advanced levels. In the field of Medicine, DTU will soon offer a course to graduate highly-qualified pharmacists.

Dr. Nguyen Ngoc Minh, Dean of the DTU Medical Department said: *"We will make efforts to ensure that DTU students graduating in Health Care and Medicine will be as knowledgeable, professional and competitive as those graduating from other universities"*.

With well-equipped laboratories that meet American standards, students now have opportunity to conduct their own research experiments. At DTU, students can be assured of the of the best study environment to open up great career opportunities nationwide.
